Finzen

Your personal finance assistant

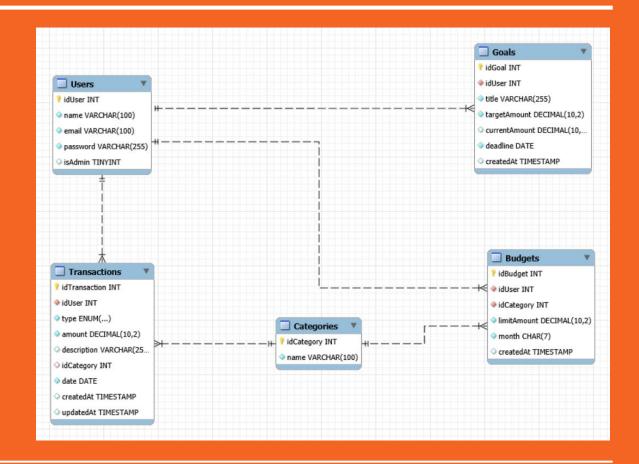

Descripción:

- Proyecto de API para contabilidad personal, presupuestos y objetivos de ahorro.
- Se conectará a una API bancaria que proporcionará los datos de transacciones de un usuario determinado, y las categorías de transacciones que usa su banco, y con todo ello operará la presente aplicación.
- Los usuarios se dan de alta por si mismos.
- Hay un usuario administrador único que gestiona a los usuarios.

Transactions y Categories no tienen CRUDs. Sus datos se obtienen desde la API del banco que ya proporciona las categorías. Los movimientos bancarios del usuario ya vienen categorizados.

CRUDs:

- Goals:
 - report
- Budgets
 - report anual
- Users:
 - C. cualquiera
 - RUD solo admin
